Solar Pool Heating

E-X-T-E-N-D

*Your Swimming
Season with*

**SOLAR
HEATING**

Sunwave Solar Pool Heating can extend your present swimming season in Australia by three, four or even up to five months! This (depending on your location), means you could be using your pool for up to EIGHT or NINE months of the year.

Think about the number of times (particularly in months like September and April) when the days are just perfect and you'd like a swim, but the water is simply too cold. This is when a Sunwave solar pool heating system can have you enjoying your pool, instead of just looking at it!

Strong and Durable

Manufactured from UV stabilised polypropylene, Sunwave pool heating collectors are super tough and durable, providing trouble free solar heating for many years in Australia and worldwide. Thousands of Sunwave pool heating collectors have been installed all around the world in some of the harshest climates imaginable.

Polypropylene is known for its ability to withstand years and years of exposure to the harsh effects of the sun.

This ruggedness also makes Sunwave solar pool heating the natural choice in Australia's cockatoo infested suburbs – a costly and annoying problem on systems manufactured using less durable material (ask us about our warranty against cockatoo attack).

Strong Performance

Maximum exposure to the sun and therefore maximum performance is ensured by manufacturing the collectors with the heating tubes extremely close together.

In addition, the individual tubes are moulded with the header pipes into one piece, eliminating hundreds and hundreds of low pressure joints typically found on many other systems. Please ask to see a sample collector and see for yourself how this feature will provide years and years of benefits to you.

Unlike many other types of Pool solar heating, Sunwave can easily be moved or relocated with a minimum of fuss and without leaving messy silicone or adhesive residue on your exposed roof.

Strong Warranty

All Sunwave components carry a 12-year, full parts warranty.

A Sunwave solar pool heating system will provide years of worry-free heating, all backed by the world's largest solar pool heating manufacturer.

Solar Pool Heating...

It's Simple!

Your pool water is pumped through hundreds of individual tubes contained within the collectors lying in the sun on your roof. The heat is absorbed by the water as it travels through the tubes and then returns to your pool.

Depending on some individual site conditions, such as amount of sun and wind already on your pool, your water could rise in temperature by six to eight degrees.

On some days, your pool may only need a couple of degrees lift to achieve your comfort level. On these days, the Sunwave controller will automatically turn the heating system off when your desired temperature is reached.

Steep roofs and high wind areas are not a problem with Sunwave solar pool heating. Our factory designed and built mountings ensure the heating collectors are fixed securely to your roof. Because other appliances such as skylights, solar hot water systems and whirlybirds are all installed securely, so should your solar pool heating system. Sunwave solar pool heating has been engineered and developed by a company with over 30 years experience in the solar heating industry.

*Large headers ensure low head loss.
Tubes & headers moulded as one, avoiding low pressure barbs & grommets.
Tubes are extremely close together providing incredible efficiency.
Spacer bars hold tubes off the roof surface, allowing roof to stay*

Pool Covers

Installing a **pool cover** (blanket) makes simple dollar saving sense. A pool cover not only keeps dirt and debris out of your pool water but it also reduces evaporation by as much as 80% in the summer months, saving you on water, chemical and heating costs.

Pool covers also prevent valuable warmth generated by your heating system from escaping the pool. The less heat you lose, the faster it is to re-heat your pool. This results in considerable energy savings and prolonged lifespan of your heating system because it is working less.

BENEFITS OF POOL COVERS

- Reduces evaporation
- Extends the swimming season
- Reduces chemical usage
- Keeps your pool cleaner
